Australia's Threat Abatement Plan 2006 for the Incidental Catch (or bycatch) of Seabirds During Oceanic Longline Fishing Operations

lan Hay¹ and Ilona Stobutzki²

ABSTRACT

This paper provides Australia's key policy document to address the impact of longline bycatch of seabirds, the *Threat Abatement Plan 2006* (TAP 2006).

The incidental catch (or bycatch) of seabirds during oceanic longline fishing operations was listed under Australian legislation as a key threatening process on 24 July 1995. A key threatening process is one which adversely affects a threatened species, or could cause a species to become endangered. As required under this legislation, a *Threat Abatement Plan for the Incidental Catch (or By-catch) of Seabirds During Oceanic Longline Fishing Operations* was prepared and approved by the Minister for the Environment on 2 August 1998. The Threat Abatement Plan (TAP) expired in August 2003, necessitating a review. The provisions of the first TAP continued to apply to all fisheries managed by the Australian Government until such the new TAP came into place.

The attached *Threat Abatement Plan 2006* is a result of that review. It was prepared to meet the requirements of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) and to coordinate national action to alleviate the impact of longline fishing activities on seabirds in Australian waters. It applies to all fisheries under Commonwealth jurisdiction.

Since the first TAP came into effect significant progress has been made in mitigating seabird bycatch. Night-setting of longlines and the use of bird scaring lines is now mandatory in high risk areas, and development and trialling of new mitigation measures has been undertaken over the last three years. A number of fisheries have recorded incidental catch rates well below the maximum permissible rate of 0.05 birds per 1000 hooks, including one fishery which has had zero bycatch for four years. However, for some pelagic fisheries it has become clear that another approach is needed to assist fisheries to achieve the target. The revised TAP, rather than prescribing mandatory mitigation measures as before, sets the performance indicators for each fishery and requires fishery managers and the fishing industry to adopt 'proven mitigation measures' to achieve this. Failure to achieve the performance indicator will require the adoption of a defined management response to reduce bycatch to the specified level, and ultimately closure of all or part of a fishery if revised management approaches are not successful.

This information is provided to assist the Commission in the further development and implementation of bycatch mitigation measures.

Attachment: Threat Abatement Plan 2006 for the Incidental Catch (or Bycatch) of Seabirds During Oceanic Longline Fishing Operations

THREAT ABATEMENT PLAN 2006 for the incidental catch (or bycatch) of seabirds during oceanic longline fishing operations

Background

Oceanic longline fishing is a technique used to target pelagic and demersal finfish and shark species. Longline fishing commenced in the southern oceans and operates in almost all Australian waters today. The impact of longline fishing activities on seabirds was not fully realised until the 1980's when seabird bycatch was first reported and then documented.

The incidental catch (or bycatch) of seabirds during oceanic longline fishing operations was listed as a key threatening process on 24 July 1995. As required under Commonwealth legislation (now the Environment Protection and Biodiversity Conservation Act 1999 — EPBC Act), a *Threat Abatement Plan for the Incidental Catch (or By-catch) of Seabirds During Oceanic Longline Fishing Operations* was prepared and approved by the Minister for the Environment on 2 August 1998. The Threat Abatement Plan (TAP) expired in August 2003, necessitating a review under subsection 279(2) of the EPBC Act. The provisions of the current TAP continue to apply to all fisheries managed by the Australian Government until such time as the new TAP is in place.

This threat abatement plan (2006) is a result of that review. It was prepared to meet the requirements of the EPBC Act and to coordinate national action to alleviate the impact of longline fishing activities on seabirds in Australian waters. It applies to all fisheries under Commonwealth jurisdiction.

Over the life of the first plan, substantial progress toward reducing the key threatening process has been achieved. A number of fisheries recorded incidental catch rates well below 0.05 birds per 1000 hooks, the maximum permissible level set by the plan as a performance indicator. The draft prescriptions in this Plan recognise this success and seek to further reduce the incidental capture of seabirds.

Despite considerable effort involving trials of various weighting regimes and other mitigation measures in the Eastern Tuna and Billfish Fishery (ETBF), areas of this fishery recorded seabird bycatch levels that exceeded 0.05 birds per 1000 hooks. This occurred until 2004/2005, when it fell below 0.05 birds per 1000 hooks. However, bycatch in this fishery appears variable across years, and the 2004/2005 levels may not be indicative. The original prescription of allowing night setting throughout the year in isolation of other mitigation measures was not sufficiently effective for flesh-footed shearwaters in particular, although it dramatically reduced the capture of albatrosses.

To date industry has largely funded the costs of the trials, with the major cost being the provision of observer coverage. There has been minimal research and development funded by non-industry sources, despite the public interest in this issue and the need to develop a technological solution to the seabird bycatch problem.

Despite the substantial progress made in the first plan, further work is required to solve the problem of seabird bycatch in fisheries. Whereas albatross species were once the

principal species caught in the Australian Fishing Zone (AFZ), changes in the distribution of fishing effort in eastern Australian waters have since led to significant problems with bycatch of flesh-footed shearwaters in pelagic fisheries operating in these waters, and a similar situation is likely to exist in western Australian waters.

Although there are a number of longline fisheries operating in the Australian Fishing Zone, only five have been identified as having significant or potential seabird bycatch problems. These are the Eastern Tuna and Billfish Fishery, the Western Tuna and Billfish Fishery, the Antarctic Longline Fishery, the Coral Sea Fishery and the Southern and Eastern Scalefish and Shark Fishery (Scalefish Hook Sector).

Information on the level and nature of interactions between seabirds and fishing gear is still incomplete in all domestic pelagic tuna fisheries, the Coral Sea Fishery and the Southern and Eastern Scalefish and Shark Fishery (Scalefish Hook Sector). There are also longline fisheries for Patagonian toothfish in subantarctic waters with potential for seabird bycatch. Information on the level and nature of interactions between seabirds and fishing gear in these fisheries is extensive and well-documented.

Detailed background information on the key threatening process, the Australian longline fisheries that impact upon seabirds, and the species of seabirds impacted by longline fishing can be found at http://www.aad.gov.au/default.asp?casid=20587

This Plan is closely linked to recovery plans for threatened seabirds which are caught on longlines and Australia's NPOA-Seabirds prepared to meet Australia's commitment to the FAO International Plan of Action for Reducing the Incidental Catch of Seabirds in Longline Fisheries. The Threat Abatement Plan relies on these recovery plans to collect specific data on population trends in the breeding populations of those threatened species found breeding in Australia. Of particular relevance is the Recovery plan for Albatrosses and Giant-Petrels which can be found at

http://www.deh.gov.au/biodiversity/threatened/publications/recovery/albatross/index.html

This Plan represents Australia's domestic contribution to the global conservation of seabirds by managing the threat from longline fishing by-catch. However, conservation of migratory seabird species relies on more than Australian action. Mitigation strategies such as those outlined in the plan should be pursued in international waters and the Exclusive Economic Zones of other Southern Hemisphere nations. The Australian Government is actively pursuing such action through the *Agreement on the Conservation of Albatrosses and Petrels*, an international Agreement that aims to achieve and maintain a favourable conservation status for albatrosses and petrels. ACAP has been developed under the auspices of another international Agreement, the *Convention on the Conservation of Migratory Species of Wild Animals* (CMS).

The following sets out the Threat Abatement Plan for this key threatening process.

Objective: (EPBC Act 271(2)(a)

The ultimate aim of the threat abatement process is to achieve a zero bycatch of seabirds, especially threatened albatross and petrel species, in all longline fisheries. However, using currently available mitigation methods, this goal is not realistic in the short term.

Therefore the objective of this Plan is to significantly reduce the bycatch of seabirds during oceanic longline operations in the Australian Fishing Zone at current fishing levels.

As many seabird species have large distributional ranges actions by the Australian fishing industry alone may not be sufficient to prevent any decline in some populations. Hence Australian government agencies will pursue the global adoption of by-catch mitigation strategies through international conservation and fisheries management fora.

The TAP objectives are to be achieved through five key areas:

- Mitigation Effective measures will be put in place, both through legislative frameworks and fishing practices, to ensure the rate of seabird bycatch is continually reduced.
- 2. Education Results from data analysis will be communicated throughout the community, stakeholder groups and international forums, and programs will be established that provide information and education to longline operators.
- 3. International initiatives— global adoption of seabird by-catch mitigation targets and methods will be pursued through international conservation and fisheries management fora.
- 4. Research and Development Research into new mitigation measures and their development, trialling and assessment will be supported through the granting of individual permits and the potential certification of new measures to apply throughout a fishery.
- 5. Innovation Potential individual accreditation of longline operators who are able to demonstrate 'bird friendly' fishing practices will be supported.

Data collection and analysis is another key action of this plan. Data will be collected and analysed to assess the performance of mitigation measures and to improve knowledge of seabird–longline interactions.

Actions to Achieve the Objectives (EPBC Act 271(2)(c)

This Threat Abatement Plan requires that the government agencies identified below implement the following actions:

Mitigation

- 1. AFMA will require all pelagic longline tuna fishers operating within the Eastern Tuna and Billfish Fishery south of latitude 25° South to adopt one of two options:
 - a line-weighting strategy that enables the bait to be rapidly taken below the reach of most seabirds; or
 - set all hooks during the night.
 - In both options vessels shall also employ at least one bird-scaring line constructed to a specified standard, not use bait that is still frozen and retain all offal during line setting.
- 2. AFMA will require all pelagic longline tuna fishers operating within the Western Tuna and Billfish Fishery south of latitude 30° South to set all hooks during the night. In addition vessels shall also employ at least one bird-scaring line constructed to a specified standard, not use bait that is still frozen and retain all offal during line setting.
- AFMA will continue to require domestic and foreign longline vessels in all demersal fisheries operating within Australian jurisdiction to adopt proven mitigation measures that ensure the performance criteria for each fishery are achieved in all areas and seasons.
- 4. AFMA will implement an appropriate management response (described below) if data analysis indicates that the Criteria, defined elsewhere in this plan, have not been met in any area, season and fishery, or that observer coverage has dropped below acceptable levels.

Problem	Management Response within 3 months		
Criterion for a longline fishery exceeded in an area during one season	AFMA will: 1. review mitigation currently deployed in area/season and the relevant circumstances — environmental conditions, fishing practices — within 1 month of the criteria being exceeded. 2. implement a revised mitigation regime to address		
	bycatch problem within 3 months of the criteria being exceeded.		
Criterion for a fishery exceeded in an area during one season within 12 months of introduction of new arrangements	3. AFMA will close the area/fishing season until the Minister for Environment and Heritage is satisfied that mitigation methods are available for implementation to enable the Criteria to be achieved. In areas where there are less than 3 operators, consideration will be given to limiting closure of an area/ fishing season to individual vessels.		

Observer coverage of a fishery in an area and/or season does not meet coverage levels in Action 5 (below).

4. AFMA will increase observer levels to meet specified levels.

Education and Compliance

- 5. AFMA and DEH will report as appropriate to key stakeholders on the analysis of bycatch data and seabirds collected in relation to achieving the objectives of the Threat Abatement Plan.
- 6. AFMA will implement extension and training programs for longline fishers where appropriate.
- 7. AFMA will implement a risk based compliance strategy to ensure that requirements relevant to the mitigation of seabird bycatch are complied with.
- 8. DAFF and AFMA will communicate the results of implementing the Threat Abatement Plan and promote seabird bycatch mitigation to foreign fishers through international fisheries forums.
- DEH will communicate the results of implementing the Threat Abatement Plan and will
 promote bycatch mitigation through relevant international conservation forums
 including ACAP and CMS.

Research and Development

10. AFMA, DAFF and DEH will promote and support research and development of new mitigation measures by facilitating access to and awareness of fisheries research funding programs.

Innovation

- 11. AFMA will support the trialling of new mitigation measures and devices under operational conditions by granting individual scientific permits to operators. AFMA will ensure the experimental design of trials will be robust and properly complied with. Measures will be tested across all seasons, on different boats and for a minimum number of hooks. Once a new measure or device has been demonstrated to consistently and effectively meet the TAP criteria, it may be included in the management arrangements for fisheries.
- 12. AFMA will support innovation and/or effective bycatch mitigation practices through individual accreditation of longline operators able to demonstrate mitigation measures that consistently and effectively achieve the TAP criteria on their vessels. This will be done through a formally agreed set of criteria under which approval to operate would be granted. The basis for the criteria would be to demonstrate an ability to meet bycatch standards on their vessel.

Other Actions

Data Collection and Analysis

13. AFMA will collect data on the bycatch of seabirds on longline vessels using observer programs. The level of observer effort shall be commensurate with the nature and level of bycatch in each area, season and fishery and shall be in accordance with the guidelines below:

ETBF and WTBF
 5% of all hooks set and hauled in all areas;

SESSF
Coral Sea Fishery
10% of all hooks set and hauled;
10% of all hooks set and hauled;

Antarctic Fisheries 20% of all hooks set and 40% of all hooks hauled.

- 14. AFMA will continue to require that all seabirds killed on pelagic or demersal longlines in the AFZ are:
 - brought aboard the vessel;
 - reported to AFMA;
 - reported to the Australian Bird and Bat Banding Schemes if banded;
 - collected for scientific analysis and stored on board the vessel in manner which will limit decay of the specimen and meet AQIS requirements; and
 - transported to a storage and analysis facility nominated by DEH.

DEH will provide seabird collection kits to facilitate appropriate handling of dead seabirds in preparation for analysis.

DEH will analyse the collected seabirds to determine species, subspecies, provenance (where possible), age, sex and breeding status.

- 15. AFMA and DEH will analyse and review the seabird–fisheries interactions data to assess seabird bycatch levels by area, season, fishery and fishing method to monitor compliance with the Criteria. These analyses will be prepared annually and show, for each area and season, the bycatch rate with confidence intervals, together with the species composition of any bycatch.
- 16. AFMA will ensure that all longline fisheries' logbooks and VMS information collection procedures accurately record:
 - the number of seabirds caught;
 - the species of seabirds caught;
 - the life status of seabirds caught;
 - the type of bait used;
 - the fishing gear and mitigation measures used and stage of operation when the catch occurred:
 - the time of day/night of the line setting and haul;
 - the date and location of the catch; and
 - external factors (weather conditions, moon phase) that may influence bycatch.
- 17. AFMA will use longline observer programs to validate seabird bycatch data collected by the logbook system and identify deficiencies in existing programs.
- 18. DEH, AFMA, DAFF, relevant experts and representatives of key stakeholders will collaborate to assess the impact of TAP actions on other marine species.

Criteria to Measure Performance of the Plan (EPBC Act 271(2)(b)

Seabird bycatch in all fishing areas and seasons is less than the following bycatch rates:

- Eastern Tuna and Billfish Fishery
 0.05 birds per 1000 hooks;
- Western Tuna and Billfish Fishery
 0.05 birds per 1000 hooks;
- Southern and Eastern Scalefish and Shark Fishery (Scalefish Hook Sector)

0.01 birds per 1000 hooks;

- Antarctic Fishery
 0.01 birds per 1000 hooks; and
- all other fisheries (including new and developing fisheries)

0.01 birds per 1000 hooks.

These criteria have been set on the basis of annual fishing levels at the time this Plan is approved. Trends in fishing effort will be reviewed annually and, if fishing levels increase or decrease significantly (>20%), DEH and AFMA will review the bycatch rates identified above, taking into account spatial and temporal trends, and the vulnerability of seabird species encountered.

Major Ecological Matters that will be affected by the Plan (EPBC Act 271(2)(f)

This threat abatement plan is unlikely to affect other ecological matters, but all actions undertaken will take into account any impacts on the conservation status of non-seabird species including fish, sharks, marine mammals and marine reptiles.

Duration and Cost of the Threat Abatement Plan (EPBC Act 271(2)(d)

This plan was approved by the Minister for Environment and Heritage on 18 July 2006 and should be reviewed in five years time.

The cost of this plan should be covered under the core business expenditure of the affected organisations.

Organisations/Persons Involved in Evaluating the Performance of the Threat Abatement Plan (EPBC Act 271(2)(e)

The Department of the Environment and Heritage, in consultation with relevant seabird experts and key stakeholders, will evaluate the performance of this plan and report the results of their review to the Minister for the Environment and Heritage, through the Threatened Species Scientific Committee.

Definitions and Acronyms

- **ACAP** Agreement on the Conservation of Albatrosses and Petrels
- **AFMA** Australian Fisheries Management Authority
- **Antarctic fishery** fisheries defined by the *Heard Island and McDonald Islands Fishery Management Plan 2002*, the *Macquarie Island Management Plan 2005*, and new and exploratory fisheries operated under the framework of the *Convention for the Conservation of Antarctic Marine Living Resources (CCAMLR)*.
- Bycatch the unintentional catch of a species of animal during fishing operations
 CMS Convention for the Conservation of Migratory Species of Wild Animals, or Bonn Convention.
- **Coral Sea Fishery** a fishery defined under the *Fisheries Management Regulations 1992.*
- **DAFF** Dept of Agriculture, Fisheries and Forestry
- **Dead seabird** a seabird caught by a longline shall be considered to be dead if:
 - 1. it is obviously dead (i.e. shows no muscle movement or corneal reflex); or
 - 2. is landed alive but displays any of the following pathologies that may lead to death on its release:
 - fracture of a wing bone, a leg bone or beak;
 - more than two primary feathers on either wing that have broken feather shafts;
 - substantial damage to the patagial tendon (indicated by a drooping wing or the inability to fly upon release);
 - an open wound (other than superficial injuries in which there is no subcutaneous muscle damage);
 - waterlogged or hydrocarbon-soiled plumage; or
 - any bird released with a hook in situ.
- **DEH** Department of the Environment and Heritage, Australian Antarctic Division
- **ETBF** Eastern Tuna and Billfish Fishery, a fishery defined in the Eastern Tuna and Billfish Fishery Management Plan 2005.
- **Fishing areas** areas divided, for the purposes of the Criteria, into 5 degree latitudinal bands within the AFZ. This means that the bycatch rates will apply separately to each of these bands. For the ETBF the waters between 30 and 35 degrees latitude south will be further divided into two zones by the meridian of longitude 156 degrees east.
- **Fishing seasons** seasons defined, for the purposes of the Criteria, into two: Summer 1 September 30 April; Winter 1 May—31 August.
- **Interaction** an interaction with a seabird where a bird is observed caught under one of the following situations;
 - (i) Dead not landed on board birds observed to be killed by direct interaction with fishing gear but not landed on the fishing vessel.
 - (ii) Dead landed on board birds landed on the vessel that are dead.
 - (iii) Alive landed on board following direct interaction with fishing gear
 - (a) injured, or
 - (b) released uninjured.

Longline fishing — the setting one or more single lines (mainline) containing many individual hooks on branch lines or snoods. The mainline can either be anchored or drifting. It can be oriented vertically or horizontally and vary considerably in length and number of hooks.

Night — the time between nautical dusk and nautical dawn.

Night setting — the setting of all hooks deployed by a vessel during the night.

Observer programs, observer coverage and observer levels — includes the use of appropriate video technology capable of independently monitoring fishing activities.

Operator — a person who holds a fishing concession as defined under the Fisheries Management Act 1991.

Seabird — means, for the purposes of the Criteria, all species in the Class Aves that are caught by any part of the fishing gear and observed to be either dead or alive.

SESSF — Southern and Eastern Scalefish and Shark Fishery (Scalefish Hook Sector), a fishery defined in the *Southern and Eastern Scalefish and Shark Fishery Management Plan 2003*.

WTBF — Western Tuna and Billfish Fishery, a fishery defined in the *Western Tuna and Billfish Fishery Management Plan 2005*.

This threat abatement plan can be obtained from:

Annex 1: Summary of the albatross species affected by pelagic longline fishing bycatch in the AFZ.

Species name	International conservation status (BirdLife International 2004)	EPBC Act listing	Likely incidence in longline bycatch	Jurisdiction and location of breeding areas
Wandering albatross	Vulnerable	Vulnerable	Moderate	Australia: Macquarie Island
Diomedea exulans				France: Kerguelen Island, Crozet Islands South Africa: Marion Island, Prince Edward Island
				U.K.: South Georgia
Antipodean albatross Diomedea antipodensis	Vulnerable (Croxall & Gales 1998)	Vulnerable	Low	New Zealand: Antipodes Island, Campbell Island
Gibson's albatross Diomedea gibsoni	Vulnerable (Croxall & Gales 1998)	Vulnerable	Moderate	New Zealand: Auckland Islands (Adams Island, Disappointment Island, Auckland Island)
Tristan albatross Diomedea dabbenena	Endangered	Endangered	Low	U.K.: Gough Island, Tristan da Cunha
Amsterdam albatross Diomedea amsterdamensis	Critically Endangered	Endangered	Low	France: Amsterdam Island
Southern royal albatross Diomedea epomophora	Vulnerable	Vulnerable	Low	New Zealand: Campell Island, Enderby Island, Auckland Islands (Adams Island, Auckland Island)
Northern royal albatross Diomedea sanfordi	Endangered	Endangered	Low	New Zealand: South Island (Taiaroa Head) Chatham Islands (Big Sister Island, Little Sister Island, Forty- fours Island)
Black-browed albatross Thalassarche melanophrys	Endangered	Vulnerable	High	Australia: Heard Island, McDonald Islands, Macquarie Island (incl. Bishop and Clerk Islets) Chile: Diego Ramirez Island, Ildefonso Island,
				Diego de Almagra Island France: Crozet Islands, Kerguelen Island
				New Zealand: Bollons Island, Campbell Island, Snares Island
				U.K.: South Georgia, Falkland Islands
Campbell albatross Thalassarche impavida	Vulnerable	Vulnerable	High	New Zealand: Campbell Island
Buller's albatross Thallassarche bulleri	Vulnerable	Vulnerable	Low	New Zealand: Snares Island, Solander Island, Little Solander Island
Pacific albatross Thalassarche nov. sp.	Vulnerable (Croxall & Gales 1998)	Vulnerable	Low	New Zealand: Three Kings Island, Chatham islands (Big Sister Island, Little Sister Island, Forty-fours Island)
Shy albatross Thalassarche cauta	Vulnerable (Croxall & Gales 1998)	Vulnerable	Moderate	Australia: Tasmania (Albatross Island, Mewstone, Pedra Branca)

Annex 1 continued

Species name	International conservation status (BirdLife International 2004)	EPBC Act listing	Likely incidence in longline bycatch	Jurisdiction and location of breeding areas
White-capped albatross Thalassarche steadi	Vulnerable (Croxall & Gales 1998)	Vulnerable	Moderate	New Zealand: Auckland Islands (Adams Island, Auckland Island, Disappointment Island) Bollons Island
Salvin's albatross Thalassarche salvini	Vulnerable	Vulnerable	Low	France: Crozet Islands (Ile des Pingouins)
Trialassarche salvini				New Zealand: Bounty Island, Snares Island
Chatham albatross	Critically Endangered	Endangered	Low	New Zealand: Chatham Island
Thalassarche eremita				
Atlantic yellow-nosed albatross	Endangered	Not listed	Low	U.K.: Gough Island, Tristan da Cunha (Tristan da Cunha Island, Nightingale Island, Inaccessible
Thalassarche chlororhynchos				Island, Middle Island, Stoltenhoff Island)
Indian yellow-nosed albatross	Endangered	Vulnerable	Moderate	France: Amsterdam Island, St Paul Island, Kerguelen Islands, Crozet Islands
Thalassarche carteri				South Africa: Prince Edward Island
Grey-headed albatross	Vulnerable	Vulnerable	Moderate	Australia: Macquarie Island
Thalassarche chrysostoma				Chile: Diego Ramirez Island, Isla lledefonso
				France: Kerguelen Islands, Crozet Islands
				South Africa: Marion Is, Prince Edward Is.
				New Zealand: Campbell Island
				U.K.: South Georgia
Laysan albatross	Vulnerable	Not listed	Low	USA: Hawaiian Leeward Islands
Phoebastria immutabilis				Japan: Bonin Islands (Mukojima)
				Mexico: Isla Guadalupe, Isla Benedicto, Isla Clarion
Sooty albatross Phoebetria fusca	Endangered		Low	France: Amsterdam Island, St Paul Island, Kerguelen Islands, Crozet Islands
				South Africa: Prince Edward Island, Marion Island
				U.K.: Gough Island, Tristan da Cunha
Light-mantled albatross Phoebetria palpebrata	Near Threatened	Not listed	Low	Australia: Heard Island, McDonald Islands, Macquarie Island
				France: Kerguelen Islands, Crozet Islands
				New Zealand: Auckland Island Campbell Island Antipodes Island
				South Africa: Prince Edward Island Marion Island
				U.K.: South Georgia

Annex 2: Summary of other species affected by pelagic longline fishing bycatch in the AFZ.

Species name	International conservation status (BirdLife International 2004)	EPBC Act listing	Likely incidence in longline bycatch	Jurisdiction and location of breeding areas
Southern Giant Petrel Macronectes giganteus	Vulnerable	Not listed	Low	Australia: Heard Island, McDonald Islands, Macquarie Island, Australian Antarctic Territory France: Crozet Islands, Kerguelen Islands Norway: South Sandwich, South Orkney, Bouvet Island South Africa: Prince Edward Island, Marion Island U.K.: South Georgia
Northem Giant Petrel Macronectes halli	Lower Risk - Near Threatened	Not listed	Low	Australia: Macquarie Island France: Crozet Islands, Kerguelen Islands New Zealand: Antipodes Islands, Auckland Island, Campbell Islands, Chatham Island, Stewart Island South Africa: Prince Edward Island, Marion Islands
Great-winged Petrel Pterodroma macroptera	Not listed	Not listed	Moderate	Australia: Western Australia (Recherche Arch., Bald Island, Coffin Island, Gull Island, Rabbit Island, Remark Island, Breaksea Island, Eclipse Island, Mistaken Island) France: Kerguelen Islands, Crozet Islands New Zealand: North Island (north-east coast) South Africa: Prince Edward Island, Marion Islands U.K.: Gough Island, Tristan da Cunha Islands
White-chinned Petrel Procellaria aequinoctialis	Vulnerable	Not listed	Moderate	France: Kerguelen Island, Crozet Islands New Zealand: Antipodes Island, Campbell Islands, Auckland Islands South Africa: Prince Edward Island, Marion Islands U.K.: South Georgia
Westland Black Petrel Procellaria westlandica	Vulnerable	Not listed	Low	New Zealand: South Island (Punakaiki River)

Annex 2 continued

Species name	International conservation status (BirdLife International 2004)	EPBC Act listing	Likely incidence in longline bycatch	Jurisdiction and location of breeding areas
Black Petrel Procellaria parkinsonia	Vulnerable	Not listed	Low	New Zealand: Great Barrier Island, Little Barrier Island
Grey Petrel Procellaria cinerea	Near Threatened	Not listed	Moderate	Australia: Macquariesland France: Crozet Islands, Kerguelen Islands, Amsterdam Island New Zealand: Campbell Island, Antipodes Islands South Africa: Prince Edward Island U.K.: Tristan da Cunha Islands
Wedge-tailed shearwater Puffinus pacificus	Not listed	Not listed	Moderate	Australia: Numerous islands off NSW, QLD and Western Australia, Lord Howe Island, Norfolk Island, North Keeling Island Other: extensive distribution throughout the tropical and subtropical Pacific and Indian Oceans.
Flesh-footed shearwater Puffinus carneipes	Not listed	Not listed	High	Australia: Lord Howe Island, South Australia (Smith Island), Western Australia (numerous islands) France: St Paul Island New Zealand: North Island (northeast and west coasts), Cook Strait
Sooty shearwater Puffinus griseus	Near Threatened	Not listed	Low	Australia Numerous islands off NSW and Tasmania; Macquarie Island Chile: Cape Horn New Zealand: Numerous islands off North and South Islands; Solander Island, Snares Island, Antipodes Island, Auckland Island, Campbell Island, Chatham Island U.K.: Falkland Islands
Short-tailed shearwater Puffinus tenuirostris	Not listed	Not listed	Low	Australia: Numerous islands off Victoria, Tasmania, South Australia and Western Australia
Southern Skua Catharacta antarctica	Not listed	Not listed	Low	Australia: Macquarie Island, Heard Island Other: extensive distribution throughout the sub-Antarctic
