

CCSBT-CC/1510/04 Rev2

COMPLIANCE WITH CCSBT MANAGEMENT MEASURES

EXECUTIVE SUMMARY

This report provides a summary of compliance with CCSBT conservation and management measures by Members and Cooperating Non-Members (CNMs).

The main points to note are:

General:

- The Global Total Allowable Catch (TAC) of SBT was over-caught in both the 2013 and 2014 fishing seasons; and
- There appears to be a gap in the Catch Documentation Scheme (CDS) where importing Members/CNMs are not always detecting and submitting CDS import documents to the Secretariat as required.

Indonesia:

- Indonesia over-caught its 2014 allocation by 313.32t. For the five year period 2010 2014 inclusive, Indonesia's reported Southern Bluefin Tuna (SBT) catch of 4,833.63t exceeded its total catch allocation (3,446t) for the same period by 1,387.63t, *i.e.* by 40.3%;
- No Re-export/Export after landing of Domestic product forms (REEFs) issued in 2014 or the first quarter of 2015 were submitted to the Secretariat;
- Indonesia provided no response to an independent contractor's Quality Assurance Review (QAR) of some of its SBT management systems. The report concluded that there was insufficient documentary evidence to demonstrate that the SBT management system in Indonesia meets the Minimum Performance Requirements of the CCSBT.

South Africa:

• South Africa submitted revised estimates for both its 2013 and 2014 catches of 65.61t and 50.5t respectively. Therefore for the five year period 2010 – 2014 inclusive, South Africa's reported SBT catch of 275.7t exceeded its allocation by 75.71t, *i.e.* by 37.9%.

Australia:

• Australia's catch of 5,419t for the 2013/14 season exceeded its effective allocation of 5,311.8t (5193t allocation plus 118.8t carry forward) by 107.2t. Accordingly, Australia voluntarily reduced its 2014/15 allocation by 108t.

European Union (EU):

• The European Union has not yet submitted any Catch Documentation Scheme (CDS) documents, in particular, importer copies of documents.

DISCUSSION

1. Compliance with Measures

1.1 Introduction

In order to assist with a review of compliance, the Secretariat has compiled a table (**Attachment A**) summarising compliance with the main CCSBT measures for reporting and submission of data between July 2014 and June 2015.

1.2 Results for 2014 and the First Quarter of 2015

For 2014 and the first quarter of 2015 the compliance categories of greatest note in **Attachment A** are as follows:

- Monthly catch reports continued to be submitted significantly late by both Indonesia and South Africa, however timeliness of monthly submissions improved markedly for South Africa from January 2015 onwards, and for Indonesia for the period February June 2015 only (but not post June 2015);
- Indonesia has not provided some Scientific Data Exchange data including catch and effort and non-retained catch data:
- Indonesia, the Philippines and South Africa did not submit ERS Data Exchange data
- In 2014, Catch Monitoring Forms (CMFs) were submitted late by Indonesia, and CMFs and Catch Tagging Forms (CTFs) were submitted late by South Africa;
- A reasonable number of importer copies of CDS documents have not yet been submitted to the Secretariat by Members;
- Korea submitted only low numbers/percentages of the importer copies of CMFs required to be submitted in 2014 and the first quarter of 2015 and is working to resolve this issue;
- Indonesia has not submitted any of the REEFs it issued for either 2014 or 2015 to date, despite copies of these REEFs having been received from importers;
- For 2014, the Secretariat recorded 4 different Indonesian fishing vessels on 5 different CMFs, 1 South African vessel on 6 CMFs, and 1 Australian vessel on 2 CMFs that were not authorised at the time of SBT harvest. Both South Africa and Australia advised that these non-authorisations were caused by administrative processing issues;
- South Africa had one instance where a new validator was not authorised before validating a CDS document;
- 278 duplicate tag numbers were submitted to the Secretariat for the 2014 calendar year (less than the 493 duplicates submitted in 2013);
- The Philippines did not submit an annual report to ERSWG;
- The Philippines and South Africa did not submit annual reports to the Extended Scientific Commission (ESC) in 2015 (nor in 2014);
- In its annual report to CC10, Indonesia recorded that for 2014 both the number of required authorised vessels that actually reported to a VMS and the level of observer coverage was unknown. In addition, no information was provided on Ecologically Related Species (ERS);
- The Philippines had no observer coverage in 2014 (nor in 2013):
- South Africa had not submitted its annual report to CC10 as at 2 October 2015.

2. Catch and Allocation

The Total Allowable Catch is CCSBT's primary conservation measure. A comparison of catches against allocation by Member/CNM since the 2010 season is provided at **Attachment B**. Monthly catch reports are usually the most up to date source of information for this comparison and have been totalled up to and including July 2015. Catches from other reports to CCSBT have also been included where possible.

In addition to **Attachment B**, Table 1 below provides the global TAC agreed by the CCSBT for each fishing season since adoption of the CCSBT Management Procedure, together with the total reported catch of Members and Cooperating Non-Members against the TAC for those fishing seasons. It is the same information as was reported to 20th Meeting of the Extended Scientific Committee in paper CCSBT-ESC/1509/04.

Table 1

Fishing Season	TAC (t)	Reported Catch (t)	Reported Under/Overcatch (t)
2012	10,449	10,204	245 (under)
2013	10,949	11,434	485 (over)
2014	12,449	12,8031	354 (over)
2015-2017	14,647 per annum	Not available	Not available

This table demonstrates that according to Members' reported catch figures submitted to the Secretariat since the 2012 fishing season, the global TAC for SBT was over-caught in both the 2013 and 2014 fishing seasons.

2.1 MEMBERS

2.1.1 Australia

Australia reported catch of 5,419t for the 2013/14 season (its monthly catch total for the same period is 5,419.8t), and therefore exceeded its effective allocation of 5,311.8t (5,193t allocation plus 118.8t carry forward) by 107.2t. Accordingly, Australia advised that it had voluntarily reduced its 2014/15 allocation (of 5,665t) by 108t to 5,557t.

2.1.2 Indonesia

Monthly Catch Reporting (2014 and 2015 – Quarter 1)

Between the due dates of 31 July 2014 and 30 June 2015, Indonesia submitted its initial monthly catch reports a total of 211 days late and an average of 18 days late per monthly submission.

¹ For some Members, the 2014 fishing season does not finish until 31 March 2015. The reported catch for the 2014 fishing season is a preliminary estimate based on various sources of information, including the 2015 Data Exchange, Monthly Catch Reports, other reports from Members and the Catch Documentation Scheme.

SBT Catch Management

In 2014, Indonesia advised CC9 that it had no system in place to control the level of its SBT catch. An independent contractor's Quality Assurance Review (QAR) report conducted in 2014 concluded that there is insufficient documentary evidence to demonstrate that the SBT management system in Indonesia meets the Minimum Performance Requirements of the CCSBT. Indonesia provided no response to this report.

In 2015 it is clear that Indonesia has tried to make improvements with respect to its management of SBT. Indonesia submitted its previously missing final catch by vessel information for the years 2011 - 2014 inclusive.

In addition, Indonesia advised (refer to paper CCSBT-CC/1510/17) that it has now:

- Allocated SBT quota to its three fishing associations and to each company within an association for vessels larger than 30 GT², and
- Developed a CDS Application System which is a semi on-line information system used to process CDS forms, and that this system will automatically monitor errors such as duplicate tag numbers and CMF numbers, etc, as well as providing the balance of catch against quota for each quota holder.

If both Indonesia's new allocation system and CDS Application prove effective, then they should improve Indonesia's capability to manage its annual catch against its quota and submit data to the Secretariat in a timely manner.

However, upon examination of Indonesia's 2015 data received to date, the Secretariat has not noticed any marked improvement in some important areas. For example:

- CDS Documents with duplicate numbers (except for small formatting differences) were sent to importers for SBT harvested in at least January and February 2015;
- No REEF documents have been submitted to the Secretariat to date, although at least nine were issued in the first quarter of 2015;
- The timeliness of Indonesia's monthly catch reporting has improved only slightly (from being an average of 20 days late per monthly submission in 2013/14 to an average of 18 days later per submission in 2014/15.

One of the essential elements of actively managing catch against quota, is to ensure that catch data are available as near to real-time as possible so as to give an early indication of when quota limits are being reached. By late August 2015, the Secretariat had received catch data from Indonesia only up to May 2015, and the reported May catch (1,773kg) appeared to be only a very small proportion of the catch that Indonesia would generally expect to catch each year in May.

Reported SBT Exports

Indonesia's annual report to the CC/EC reports significant exports to the USA for each year between 2010 and 2014³. The Secretariat notes that Indonesia's reported exports to the USA for 2013 and 2014 greatly exceed its exports to the USA currently recorded on 2013 and 2014 CDS documents (either as net or whole weights) as presented in Table 2 below.

-

² GT is Gross Tonnage.

³ It is not certain if these reported exports represent net weights or whole weights.

Table 2

	CDS I	Indonesian National Report	
Year	Estimated Net Weight (t) of SBT Exported by Indonesia to USA	Estimated Whole Weight (t) of SBT Exported by Indonesia to USA	Weight of SBT Exports (t) to the USA
2010	155.56	178.9	172
2011	194.71	223.91	193
2012	168.78	194.09	200
2013	32.6	37.49	211
2014	0.23	0.26	94

Annual Reported Catches for 2010 - 2014

Indonesia's reported catch has exceeded its allocation for each allocation period since the CDS commenced on 1 January 2010. Indonesia reported its annual catch for 2014 as 1,063.32t, which is 313.32t higher than Indonesia's 2014 allocation of 750t.

Catch and Allocation

Table 3 summarises Indonesia's reported annual catches of SBT since the CDS commenced.

Table 3

Year	Allocation (t)	Reported Catch (t)	Estimated Catch from CDS Documents (t)
2010 & 2011	1,302	1,477.90	1345.10
2012	685	909.76	839.07
2013	709	1,382.65	1,372.28
2014	750	1,063.32	1052.01
Total (2010 – 2014)	3,446	4,833.63	4,608.46

Therefore, according to reported catches for the four year period 2010 - 2014 inclusive, Indonesia has exceeded its allocation for this five year period by a total of 1,387.63t or 40.3%.

2.2 CNMs

2.2.1 South Africa

Monthly Catch Reporting

Between the due dates of 1 July 2014 and 30 June 2014, South Africa submitted its initial monthly catch reports a total of 145 days late and an average of 12 days late per monthly submission. However, many of the monthly catch reports submitted during this period were for nil catches.

Reported Catch and Allocation

South Africa's reported catch of 50.5t for 2014 has exceeded its allocation by 10.5t.

In 2013, South Africa's reported catch was 65.61t, therefore exceeding its allocation by 25.61t. Over the past 5 years combined South Africa has exceeded its allocation by a total of 75.71t or 37.9% (refer to Table 4).

Table 4

Year	Allocation (t)	Reported Catch (t)	Estimated Catch from CDS Documents (t)
2010 & 2011	80	83.0	81.57
2012	40	76.6	76.93
2013	40	65.61	61.99
2014	40	50.5	46.09
Total (2010 – 2014)	200	275.71	266.58

2.2.2 The European Union

The European Union reported nil catches of SBT during 2013, 2014 and 2015⁴, but small bycatches of SBT between 2010 and 2012 inclusive. No catch by vessel information nor CDS documentation was provided for the 2010 – 2012 catches.

In its 2013 National Report to the CC/EC, the EU advised that this was because:

"The small amount of EU SBT by-catches is either consumed by the vessel crew or given to local workers in the port of landing that assist with off-loading the vessel. By-catches of SBT taken in the WCPFC Convention Area are off-loaded in Papeete (Tahiti), and by-catches taken in the IOTC Convention Area are off-loaded in Durban (South Africa). EU SBT bycatches therefore never enter any commercial channels, for which reason the catch documentation is not filled in or the specimen of SBT are not tagged."

CDS documents submitted by CCSBT Members indicate that small amounts of SBT were exported to EU Members on CMFs in 2010 and 2014 (2 CMFs), and on REEFs in 2010 to 2013 inclusive. No importer copies of these CDS documents have been provided to the Secretariat. The EU followed up on the non-provision of the two missing 2014 CMFs with its relevant Member State, but importer copies were not located. The importance of providing these in future was emphasised.

Figures of intra-EU trade of SBT presented by the EU for 2007-2012 (derived from Eurostat) showed a high number of trade exchanges, especially of live SBT which is highly improbable. Similarly, high levels of intra-EU SBT trade, including of live SBT, are indicated by the Secretariat's own annual analyses of trade using the Global Trade Atlas (GTA).

In its National Report to CC9 the EU advised that:

"An internal assessment has been launched on the trade and intra-EU exchange of SBT following reporting by GTA of SBT exchanges within the EU despite no imports/landings. The audit is still ongoing. Preliminary conclusions indicate misreporting of species. The follow up will be decided upon conclusion of the audit."

6

⁴ Catches for 2015 are still subject to final validation

This year, the EU provided an update on the results of this audit, advising that during 2013 and 2014 it engaged with the relevant EU Member States to verify the trade data and take appropriate action as required, and that:

"After a full investigation, including going back to importers/exporters for the relevant years, the preliminary outcome is confirmed that the relevant trade statistics were erroneous as the species are miscoded and do not concern SBT", and that the EU:

".... will continue to work with the relevant administrations to follow-up and verify that encoding errors are avoided."

3. Characterisation of Global SBT Fisheries

The Fifth Meeting of the Compliance Committee (CC5) agreed that the Secretariat should annually update the information contained within the "Characterisation of global fisheries for southern bluefin tuna", with the most recent year's data. The updated information is provided at **Attachment C.**

Prepared by the Secretariat

Compliance with CCSBT measures for the period 01-Jul-2014 to 30-Jun-2015

For CDS data, these tables cover the 2014 Calendar year and the first quarter of 2015, because data for Jan - Mar 2015 are to be provided by 30 June 2015.

Items with a tick or a score greater than 90% and that have no duplicate tag number or authorisation issues are un-coloured	
Items categorised as 'F', or a score between 50 - 89.9% and that have no duplicate tag number or authorisation issues	
Items categorised as 'P' or 'X' or a score less than 50%, and/or items that have tag number duplication or authorisation issues	

Table 2: Number of CMFs and REEFs from which the CDS Data Percentages in Table 1 of Attachment A were Derived

CDS Data Submission Period		Number of CMFs on the CDS System for each Member/ CNM ¹⁷											
	Number of CMFs on the System	Australia	Indonesia	Japan	Korea	New Zealand	Taiwan	Philippines	South Africa	European Union	Number of CMFs		
2014	Domestic Landings CMFs	290	163	101	0	89	22	0	13	n/a	678		
2014	Export CMFs	586	704	0	18	316	80	1	95	n/a	1,800		
2014	TOTAL CMFs	876	867	101	18	405	102	1	108	n/a	2,478		

First Quarter of 2015	Domestic Landings CMFs	9	27	20	1	7	3	n/a	n/a	n/a	67
First Quarter of 2015	Export CMFs	1	208	0	0	16	12	n/a	n/a	n/a	237
First Quarter of 2015	TOTAL CMFs	10	235	20	1	23	15	n/a	n/a	n/a	304

CDS Data Submission Period			Number of REEFs on the CDS System for each Member/ CNM										
		Australia	Indonesia	Japan	Korea	New Zealand	Taiwan	Philippines	South Africa	European Union	Total Number of REEFs		
2014	Number of REEFs on the	79	22	175	11	0	0	0	0	0	287		
First Quarter of 2015	System	0	9	73	1	0	0	0	0	0	83		

- ✓ For Data and CDS Indicates Full compliance where the total number of days outside the due date was less than 28 (when added together for the entire period)
 - For Members Reports Indicates that reports contained all information as required by the template
 - For Authorised Vessels/Farms indicates that data has been received and there is no evidence of periods of non-authorisation
- F For Data and CDS Indicates Full compliance but the total number of days outside the due date was greater than 28 (when added together for the entire period)
 - For Members Reports Indicates that reports contained partial information on all aspects of the template
 - For ERS indicates that a plan is 'Under Development'
 - For Authorised Vessels/Farms indicates that full information has been received, however there has been some period of non-authorisation
- P Indicates Partial compliance (not all data received or no advice provided for a part of the period)
 - For Members Reports indicates that report did not contain all of the information specified in the template
 - For Authorised Vessels/Farms indicates that full information has not been received, and one or more Fishing Vessels were not authorised while fishing
- X Indicates non-compliance (no data received, or no advice provided)
 - For ERS indicates non-implementation of measure, or no advice provided
- n/a Not Applicable
- NRDE Not specified as required for the ESC Data Exchange because this Member/Cooperating Non-Member is not currently able to provide this type of information. However, they are encouraged to start collecting/providing this core information as soon as possible.

Therefore, these figures include CMFs that:

- contain a vessel which wasn't authorised on the catch/harvest date
- contain a validator who wasn't authorised on the validation date
- were not submitted to the Secretariat by the exporter (but the Secretariat has already received a copy from the importer).

These figures do not include CMFs that contain only tagging data errors. All tagging data error statistics are provided in separate rows of the table.

- the export CMF was altered after the initial export, but the importer (and so the Secretariat) did not receive copies of the updated export CMF, or
- the export CMF was altered after the initial export, and updated copies were sent to the importer, but the Secretariat received the original and not the updated copies back from the importer.

¹ The EU has submitted a nil SBT catch for 2014 (and the first quarter of 2015) and therefore there is no final catch by vessel, total catch by fleet, or ERS data that needs to be submitted.

² For Scientific Data and ERSWG Exchange, this table records whether the required information due between 1 August 2014 and 31 July 2015 has been received by the Secretariat. This is a slightly different time period than many items in this table, but allows the Secretariat to report whether all data exchange items required to be submitted for the 2014 calendar year have been provided.

³ Indonesia did not submit vessel numbers by port.

⁴ Korea submitted length data but did not provide raised length data as required for the first time in 2015.

⁵ This category monitors the provision of other agreed primary data items for specific Members, including: Catch at age, non-retained catches, CPUE indices, Aerial survey, troll indices and historical catch and effort.

⁶ Incomplete/inaccurate information includes things such as missing information for one or more fields and incorrect information such as invalid codes/conversion factors etc.

⁷ Variation from 100% means that export and import versions of the CMF have different values. This may be caused by situations such as the following:

⁸ South Africa has not yet reconciled its CMF and Catch Tagging Form (CTF) data for 2014.

- ¹³ CMFs/REEFs that had a(n) (re-)export date of 24 March 2015 or later and were frozen (or that had a(n) (re-)export date of 29 March 2015 or later and were fresh product), and that have not yet been submitted to the Secretariat by the importers Australia, Japan or Korea <u>are not included</u> in these figures. That is because it's unlikely that the SBT on these forms will have been imported by 31 March 2015 (the end of the quarter), and therefore such forms would not be due to be submitted to the Secretariat until 30 September 2015.
- ¹⁴ According to the CCSBT's 'Resolution on Establishing a Program for Transhipment by Large-Scale Fishing Vessels', the master of a receiving Carrier Vessel is required to complete and transmit a CCSBT Transhipment Declaration to the CCSBT Secretariat within 24 hours of the completion of the transhipment. This provision came into effect on 1 January 2015 and therefore the results presented for this item are only for known transhipments in port that occurred between 1 January and 30 June 2015.
- ¹⁵ Members provided some comments, however a comprehensive report including an assessment of the content and conclusions of the reports of the observers assigned to carrier vessels which received transhipments from their tuna longline fishing vessels with freezing capacity (LSTLVs) was not provided.

⁹ The intended importing State/Entity is assumed to be the export destination specified on the CMF or REEF, however the Secretariat recognises that it is possible that, in some cases, the shipment's actual export destination may change at shipping time and may therefore sometimes differ from the intended export destination.

¹⁰ Copies of these 2 CMFs have not been able to be provided yet. The Secretariat was advised that this is because these CMFs were collected as evidence in a compliance investigation.

¹¹ For Indonesia, one of the tag numbers was provided in triplicate rather than in duplicate.

¹² Korea is improving its existing systems and processes to ensure that the required importer copies of CDS documents will be submitted to the Secretariat in future.

¹⁶ The required information was provided with the exception of the latest version of relevant observer manuals in their original language for reference

¹⁷ The Secretariat classifies CDS documents as belonging to a specific year or quarter according to the year/quarter that the earliest date (out of the catch validation date, exporter signed date or export validation date) falls into.

Catch and Allocation for the "2010 Season" to the "2015 Season" for Each Member/CNM1

Note: Only columns relating to "fishing season" were highlighted where appropriate, therefore the last column 'Calendar year ...' in the tables below was not highlighted in any cases.

Cells highlighted in bright yellow indicate that the reported fishing season's catch is greater than the Effective Catch Limit, and the overcatch was not paid back.

Cells highlighted in orange/gold below indicate where CDS estimates of the fishing season's catch are higher than the nationally reported estimates by more than 0.5t.

Cells highlighted in pale green indicate that the reported fishing season's catch is greater than the Effective Catch Limit, but the overcatch was paid back by a voluntary reduction of allocation in the following season.

'n/a' Means 'not applicable'.

- OL Official Letter
- CC National Reports to the Compliance Committee
- ESC National Reports to the Extended Scientific Committee
- ERSWG National Reports to the Ecologically Related Species Working Group
- DE Data Exchange (2015).

¹ The allocations in this attachment take into account that South Africa did not accede to the Convention by 31 May 2013/14/15, and therefore there was 40t of additional quota that was allocated between Members for the 2013 - 2015 TAC years.

² In order of preference, the following information sources were used, (but with most recent data reports taking highest preference regardless of the order below):

³ Australia's allocation for the 2014/15 year was 5,665t. In its 2015 annual report to the CC/EC Australia advised that it had exceeded its 2013/14 fishing season allocation (by 107.2t) and that it had consequently voluntarily reduced its 2014/15 allocation by 108t, giving it a reduced allocation for 2014/15 of 5,557t.

- ⁶ The official letter (OL) from Australia relating to its carry-forward (Circular #2014/040) noted a slightly higher catch (4,539.1t) for the 2012/13 fishing season than the catch figure (4,538t) for 2012/13 that was provided more recently in Australia's National Report to the CC/EC.
- ⁷ On 25 January 2012 (see CCSBT Circular #2012/002), Australia advised that it had exceeded its 2010 and 2011 fishing seasons allocation by 19.07t and that it had consequently voluntarily reduced its 2012 allocation to 4,508.93t in accordance with Compliance Policy Guideline 3 (Corrective Actions Policy).
- ⁸ CCSBT17 decided that that the TAC allocation decided at CCSBT 16 was to be considered a 2 year total TAC, and could be distributed across the two year period, with unused catch from the first year carried forward to the second year.
- ⁹ For Indonesia, data from monthly catch reports are available for catches up to the end of May 2015.
- ¹⁰ This figure has been updated as part of the Secretariat's ongoing CDS reconciliation work.
- ¹¹ Indonesia, in cooperation with the Secretariat, re-counted its 2010 and 2011 monthly catches and applied conversion factors to convert net weights to whole weights (previously monthly and annual catch weights had been provided as processed weights). This resulted in Indonesia's 2010 and 2011 annual catch estimates increasing from 471t to 635.5t, and from 673t to 839.27t respectively. Indonesia subsequently provided another small update to its 2011 reported catch (it increased slightly to 842.4t) in its report to CC/EC, therefore giving a revised 2011 reported catch total of 1477.9t.
- ¹² The effective catch limits for Japan and New Zealand agreed at CCSBT 16 were 2,261t and 709t respectively. The figures shown here include a 139t transfer from New Zealand to Japan.
- ¹³ Catches for 2015 are still subject to final validation.
- ¹⁴ The EU over-caught its allocation by 0.8t in 2010. While it did not officially advise CCSBT that this over-catch was paid back by any voluntary reduction of its quota allocation in the following year (2011), its low catch of only 3.3t in 2011 equates to the EU having effectively paid back its small 2010 overcatch.
- ¹⁵ South Africa provided a revised estimate of its 2013 and 2014 catches to the Secretariat in July 2015.
- ¹⁶ This figure includes a total of 2.3t of exports recorded on CDS forms that have been reported as fraudulent by South Africa.

⁴ Data from monthly catch reports are available for catches up to the end of July 2015.

⁵ Australia's original allocation for the 2013 fishing season was 4,698t. When South Africa didn't accede to the Convention by 31 May 2013, Australia's allocation for the 2013 season became 4,713t. Australia advised that it had exceeded its allocation for the 2012 fishing season by 34.6t. In accordance with the Corrective Action Policy, Australia then voluntarily reduced its allocation for the 2013 season by the previous season's over-catch of 34.6t, resulting in its 2013 allocation of 4,678.4t.

Characterisation of Global Fisheries for Southern Bluefin Tuna

Includes: (A) Catching Sector, (B) Transporting / landing, (C) Markets, and (D) Monitoring

(A) Catching Sector (2014 calendar year)

Domestic Catch	Catch (t) ¹	No. of vessels ²	Size of authorised vessels in Fleet ³
Lining within domestic waters	2329.5	259	
Australia	390.1	17	20.6m average (10.5m – 25.5m)
Indonesia	1,063.34	190	20.7m average (11.0m – 47.6m)
New Zealand	825.6	37 ⁵	22.1m average (12.0m – 60.5m)
South Africa	50.5	15 ⁴	31.4m average (21.5m – 49.4m)
Surface ⁶ within domestic waters	4168.5	5	
Australia	4,168.5	5	28.5m average (14.7m – 45.5m)
Recreational	Unknown		
Australia	There is an active recreational fishery f	or SBT, but there is insufficient data to e	estimate the recreational SBT catch
New Zealand ⁷	0		
South Africa	Allowance of 10/day per person but the	practicalities of reaching the grounds m	neans that recreational take is unlikely

Philippines ⁸	44.6	1	50.7m average (50.7m – 50.7m)
Taiwan	952.0	69	47.8m average (30.6m – 59.2m)

¹ Based on the catch data provided to the Secretariat (*i.e.* Data exchange)

Based on the catch data provided to the Secretariat (*i.e.* Data exchange)

The figures indicate the number of vessels which actually caught SBT based on CDS documents provided to the Secretariat Represents the size range of vessels that actually caught SBT, *i.e.* not the size range of all authorised vessels in the fleet This figure includes a proportion of catch which was caught in the High Seas

This figure includes vessels flagged to Japan that caught SBT under Joint Venture/Charter agreements with Japan Includes vessels that use seining or trolling methods

NZ has a recreational allowance of 8t, customary allowance of 1t, and allowance for other sources of mortality of 20t

All Philippines catch is assumed to be taken on the High Seas based on CDS Data from 2014

(B) Transporting / landing (2014 calendar year)

These figures are for vessels which were on the CCSBT authorised carrier vessel list during 2014
 Based on at sea transhipment reports of SBT provided to the Secretariat. Note that where SBT is transhipped from the same fishing vessel at the same time and recorded on the same Transhipment Declaration, but will be offloaded at more than destination, the Secretariat has counted this as a single transhipment event in this table.

¹¹ At sea transhipments not permitted

¹² Based on most recent information in Compliance Action Plans and/or National Reports. For Indonesia and the Philippines, the Secretariat added Mauritius and Singapore respectively based on export points listed on

¹³ The Secretariat has not been advised of any formally designated ports

(C) Markets (2014 calendar year) Quantities are net weights in tonnes¹⁴

i) For SBT Imported on CMFs (based on the export date being in 2014)

		Vessel Monitoring S	Systems (2014 fishing season)				
Australia	VMS is mandatory for all SBT vessels. 26 vessels actually reported to a national VMS (2013/14 fishing season).						
EU	VMS requirements under CCSBT, CCAMLR, ICCAT, IOTC and WCPFC apply. All vessels are required to report to the Fisheries Monitoring Centre (FMC) of the Flag State.						
Indonesia	The requirement for vessels between 30 – 60 GT to have VMS is currently transitional. According to Indonesia's National Report, of the 362 Indonesian vessels on the CCSBT authorised vessels list, 251 were required to report to a national VMS during 2014, but it is unknown how many did.						
Japan	Mandatory for all far seas fishing vessels. 90 authorised vessels actually reported to a national VMS in the 2014/15 fishing season.						
Korea	Mandatory for all SBT fishing vessels. 18 authorised vessels reported to a national VMS in the 2014/15 fishing season.						
New Zealand	Mandatory in large-scale vessels (>28m), as well as foreign charter vessels; New Zealand flagged and registered vessels operating outside of NZ waters; vessels issued with a foreign license to fish in NZ waters; and other vessels as specified by the Chief Executive. 8 authorised vessels actually reported to a national VMS in 2013/14.						
Philippines	The Philippine Fisheries Administration formally operationalised its VMS to track its flagged vessels operating in IOTC, ICCAT and WCPFC. The Bureau of Fisheries and Aquatic Resources (BFAR) requires commercial fishing vessel owners to submit vessel tracking agreements, authorising BFAR to monitor and track their respective vessels. All required vessels reported to a VMS in 2014.						
South Africa	Mandatory for all vessels. It is not yet known how many authorised domestic longline vessels reported to a national VMS during 2014.						
Taiwan	Mandatory for all SBT fishing vessels. 71 authorised vessels actually reported to a national VMS during the 2014/15 fishing season.						

 ¹⁵ Based on Members'/CNMs' National Reports
 16 ETBF refers to the Eastern Tuna and Billfish Fishery and WTBF refers to the Western Tuna and Billfish Fishery. Both fisheries are part of the longline sector.
 17 The percentages represent the percentage of retained SBT that were observed when caught (note that there was no catch of SBT in the WTBF in 2013/14)
 18 Pertains to hooks observed in the SBT area
 19 There was 2.9% effort coverage for the EU's IOTC longline fleet
 20 Figures are for the 2012/13 and 2013/14 fishing seasons
