## Proposal for the recruitment monitoring survey in 2011/2012

2011/2012 年の加入量調査のプロポーザル

National Research Institute of Far Seas Fisheries 遠洋水産研究所

#### Summary

Recruitment surveys for age one SBT in 2011/2012 are proposed. The surveys, including the piston-line trolling survey and other relevant researches, will be carried out off the south and west coasts of Western Australia.

## 要約

2011/2012年のミナミマグロ1歳魚加入量調査を提案する。計画は、ピストンライン曳縄調査、 アーカイバルタグ、関連する他の調査を含み、西オーストラリアの西岸から南岸海域で実施する 予定である。

#### Objectives

The main objective is obtain the index of the recruitment level of age one (the 2011 year class) southern bluefin tuna (SBT) that distributed off the south coast of Western Australia. In addition, data for determine dynamics of SBT distribution within the research area will be collected.

#### Methods

The surveys will be carried out off the south and west coasts of Western Australia in a period between January and February 2012 for the age one SBT. An Australian fishing boat will be chartered. Because it is a monitoring survey, consistency of method to the previous years will be sought. Detail of last survey was described in CCSBT-ESC/1107/29.

In the cruise, we will try to collect information of age one SBT distribution off Western Australia for a wide range as much as possible with trolling. When SBT are caught in good condition, SBT will be tagged and released with two CCSBT conventional tags per individual following the CCSBT tagging procedure. Some of SBT will be also implemented archival tags. If SBT are not appropriate for tagging, biological samples, including otolith, muscle

#### CCSBT-ESC/1107/35

tissue and stomach contents, will be collected. Stomach contents will be observed for fish other than SBT (such as skipjack, bonito and mackerel) to compare feeding ecology between SBT and others. CTD (Conductivity Temperature Depth profiler) will be cast in some points for oceanographic observations. Towing type underwater video will be taken to investigate SBT school structure and behavior.

#### Budget

Fisheries Agency of Japan will bear the expense of the trolling survey.

#### Scientific research permission from Australian government

Because this survey will be carried out within the Australian EEZ, the scientific research permission from Australian government is necessary.

### Report of the results

Results will be submitted to the next CCSBT-ESC in documents. Mortality of SBT by the surveys will be also reported to the next CCSBT-ESC.

## Seeking endorsement

We seek endorsements from the Extended Scientific Committee of CCSBT for the research described above, for including the conventional tagging in these research surveys as a part of the CCSBT SRP tagging, and for using Research Mortality Allowance for these research surveys as shown in CCSBT-ESC/110736.
