

Monitoring on Japanese markets

Abstract:

This document, which is an updated version of CCSBT-CC/0810/21, provides results of the market monitoring, including the monthly monitoring of the Tsukiji Market. By inputting the updated market information into the methodology used in the Independent Review of Japanese SBT Market Data Anomalies (JMR) report, the estimated domestic catch based on the domestic market information was calculated. Consequently, it is concluded that differences is negligible between the estimated domestic catch and reported domestic catch.

要旨:

本ドキュメントは、CSBT-CC/0810/21 をアップデートしたものであり、築地市場における毎月のモニタリングを含む、市場モニタリングの結果を提供するものである。ミナミマグロ資本市場データの不調和に関する独立レビュー（JMR）報告書が用いている方法に、市場に関する最新の情報を入力して、市場情報に基づく推定国内漁獲量を算出した。その結果、市場情報に基づく推定国内漁獲量と報告漁獲量の差は無視できるものと結論づけられる。

1. Background:

Japan changed its domestic regulations for SBT fisheries in April 2006. The new domestic regulations include 100% landing inspection by government officials, establishment of 8 designated ports for SBT landing, tagging requirement for individual SBT caught, and prohibition of selling or buying illegally caught SBT. These regulations are strong enough to ensure the accuracy of Japan's reported catch; nonetheless, Japan has been conducting the market monitoring and presenting its results (i.e. CCSBT-CC/0810/21) to the CCSBT in order to provide further assurance regarding domestic SBT fisheries management.

Furthermore, at the CCSBT 15, “Australia and Japan expressed their intention to work for improvement of monitoring of Japanese wholesale markets and Australian SBT farming operations and report back the results to the 16th Extended Commission Meeting. The Extended Commission welcomed this cooperative initiative. Members agreed on the need to work cooperatively in order to clarify the actual global SBT catch to the greatest extent possible.” (See paragraph 17 and 18 of the CCSBT 15 report)

2. Market information and methodology used in this document:

(1) In-Market Frozen Farmed SBT:

Japan obtained updated information on in-market frozen farmed SBT between 2005 and 2008 from wholesalers in the Tsukiji Market. The following ratio, which is based on the information from the

wholesalers, is used to estimate domestic catch based on information from the domestic market in this document.

Year	Ratio
2005	12.66% (Information from the wholesalers)
2006	15.50% (Information from the wholesalers)
2007	32.37% (Information from the wholesalers)
2008	35.64% (Information from the wholesalers)
2009	35.64% (same as for year 2008)

(2) In-Market Frozen Wild imported SBT:

Japanese government officials and scientists have been visiting the Tsukiji market once a month since December 2007 in order to obtain information on (a) time lag of SBT caught by Japanese longline vessels between catching and selling at the market and (b) in-market frozen wild imported SBT. Japanese government officials and scientists visit the Tsukiji market around 4 AM on Friday once a month. It has been decided to conduct this monitoring on Friday, because the volume of SBT sold at the Tsukiji market on Friday is generally larger than on any other days of week. Detailed results of the monthly monitoring of the Tsukiji Market are described in Attachments 4 and 5. Attachment 4 shows the ratio of domestic and imported frozen wild SBT, and the following ratio is used to estimate domestic catch based on information from the domestic market in this document.

Year	Ratio
2005	5% (same as for the JMR report)
2006	12.02% (Linear interpolation with 2005, 2007, 2008, and 2009 ratio)
2007	16.85% (Information from the monitoring at the Tsukiji Market)
2008	30.48% (Information from the monitoring at the Tsukiji Market)
2009	37.89% (Information from the monitoring at the Tsukiji Market)

(3) Time lag of SBT caught by Japanese longline between catching and selling at fish market:

The tagging requirement for individual SBT when caught enables a direct calculation of the time between capture by Japanese longline vessels and sale at the market. The first results using this approach were given last year's Extended Scientific Committee meeting (CCSBT-ESC/0809/40). However, the first results were based on relatively few data (829 individual tag data), and the continuing monthly monitoring has provided a much larger data (1859 individual tag data). The results shown in Appendix 5 are based on the larger data and more reliable than those provided last year. The following formula, which is based on the larger data, is used to estimate domestic catch based on information from the domestic market in this document.

$$\text{SBT distributed (sold) Market Year (i)} = 0.1\% \text{ caught in year (i-3)} + 7.7\% \text{ caught in year (i-2)} + 66.8\% \text{ caught in year (i-1)} + 25.4\% \text{ caught in year (i)}$$

(4) Double counting ratio for 2006-2009:

This document uses average double-counting ratio from 2003 to 2005 in the JMR report (Case 1=11.82%, Case 2=4.35%) for 2006 to 2009.

		Case 1	Case 2
Year	2003	11.80%	4.54%
	2004	12.27%	4.44%
	2005	11.39%	4.06%
Average		11.82%	4.35%

(5) Details of calculation:

Regarding other factors, such as off-market domestic wild SBT, this document uses the methodology which has been used in the JMR report. Details of calculation are included in Attachments.

3. Result and conclusion:

By inputting the abovementioned updated market information into the methodology used in the JMR report, the estimated domestic catch based on the domestic market information was calculated. Consequently, it is concluded that differences is negligible between the estimated domestic catch and reported domestic catch.

	2005		2006		2007		2008	
	Case 1	Case 2						
1. Estimated domestic catch based on domestic market information (See Attachment 1, whole weight)	8,554	9,419	5,059	5,669	3,186	3,630	2,925	3,341
2. Reported domestic catch including NZ/Japan Joint Venture (whole weight)	7,942	7,942	4,312	4,312	3,054	3,054	3,152	3,152
3. Differences (1.-2.)	612	1,477	747	1,357	132	576	-227	189

Note: Following the CCSBT Rules of Procedure 10.8, the release of this document outside the CCSBT shall be restricted.

Attachment 1

Calculation of Japanese domestic LL SBT catch by year using catch/market lag formula

See attachment 5: SBT distributed (sold) Market Year (i) = 0.1% caught in year (i-3) + 7.7% caught in year (i-2) + 66.8% caught in year (i-1) + 25.4% caught in year (i)

Case 1 (Double Count 11.82%)

Market Year (i)	Total domestic caught SBT distributed in Japan and exported (see attachment 2)	i-3 (0.1%)	Year of Catch	i-2 (7.7%)	Year of Catch	i-1 (66.8%)	Year of Catch	i-0 (25.4%)	Year of Catch
2005	10,686	11	2002	823	2003	7,139	2004	2,714	2005
2006	8,265	8	2003	636	2004	5,521	2005	2,099	2006
